

***2008 IOTA SIGMA PI
UNDERGRADUATE AWARD
FOR EXCELLENCE IN CHEMISTRY***

Kari Brumback, University of Tulsa

Not only has Karin demonstrated excellence in chemistry including research and leadership (she's the president of the Einsteinium Chapter of ISP), but also by her well roundedness. The ability to excel in both the sciences and the humanities is a rare and admirable quality. Excelling in two majors would keep most students on campus studying the majority of time. Kari, however, also volunteers to monitor urban-impacted creeks on a regular basis, demonstrating her interests in working toward solving real-world problems. Such a well-rounded, intelligent, compassionate person is an ideal representative for ISP. She also has a passion for teaching and plans to pursue a tenure-track position after completing a Ph.D. at Yale University.
